PROFESSIONAL SUMMARY

Full-stack developer with 5+ years shipping product to production, from the interface to the payment terminal. Minority partner and technical owner at Tippit: Mercado Pago, the Android app on the Clover SDK, and the card-present terminal on the INI SDK. I co-founded FLIA-IT with friends and we build several products there. I already hold the University Programmer Analyst degree and I am about to finish a B.S. in Systems at UNLP. The thesis is SIAT, a computer-vision traffic analysis system.

SKILLS

Payments and terminals: Mercado Pago (Checkout Pro, Bricks, OAuth, webhooks), Clover SDK, INI card-present SDK, point of sale (POS), QR, NFC, Apple Wallet, Google Wallet, reconciliation

Languages: TypeScript, JavaScript, Python, Kotlin, Java, SQL, Bash

Frontend: React, Next.js, SvelteKit, tRPC, Tailwind CSS, Expo

Backend: Node.js, Express, FastAPI, Django, NestJS, REST, OpenAPI

Data: MongoDB, FerretDB, PostgreSQL, MySQL, Redis

DevOps: Docker, Linux, Git, GitHub, VPS, AWS, n8n, BullMQ, Caddy, Vercel, Hostinger

Integrations: Clerk, JWT, Strapi, WhatsApp Cloud API, WebRTC, webhooks

EXPERIENCE

Minority Partner and Full-Stack Developer — Tippit

2023 – Present · Argentina

Production platform for restaurants: tips, staff, digital menu, gift cards, QR codes, and payments. Organization admin. 3,000+ commits authored.

- Built the product from the ground up and remain the top contributor: Next.js, React, TypeScript, tRPC, Express, MongoDB, and FerretDB.
- Implemented employee payouts with Mercado Pago: Checkout Pro, embedded Bricks, OAuth, and webhooks. The guest pays on Mercado Pago or inside the site; the same employee receives the money.
- Built the Android app (Kotlin) for Clover terminals. The POS reports the payment through the SDK even if the app is closed; the tip is assigned to the employee; the review QR belongs to the person who served the table; the merchant auto-provisions; the receipt prints on the thermal printer.
- Designed the card-present terminal on the INI SDK: amount first, tip second. INI notifies by webhook (payment, rejection, refund, void) and Tippit reconciles with an external reference.
- Ran the environment: Docker, VPS, MongoDB to FerretDB migration, Strapi, Clerk, and n8n.

Co-founder and Full-Stack Developer — FLIA-IT

2025 – Present · Argentina

Software company I started with friends. Several products in parallel. Organization admin. 800+ commits.

- **Collect&Go.** Loyalty for shops: the customer earns points with a QR or an NFC tap and saves the card to Apple Wallet or Google Wallet, with no app install. Landing page, scanner PWA, FastAPI, and MongoDB.
- **trip-os.** Mobile-first travel super-app with an agent that plans the trip. API, Postgres, MinIO, Meilisearch, and Caddy on Docker.
- **Campaign Maker.** WhatsApp campaigns on Meta's Cloud API: templates, contact upload, BullMQ and Redis queues, webhooks, and retries when Meta rate-limits.
- Client products: Granja Don Alvaro (Next.js shop, Spanish and English), Looká (virtual try-on with Django, React, WebRTC, and the Decart SDK), LCN VTG (vintage catalog that opens WhatsApp with the item already written), and Plantaria (WhatsApp contact landing).

Backend Developer — TheBroos Agency

2022 – 2023 · Argentina

- Built web APIs and services in Python and FastAPI, deployed on AWS and VPS.

THESIS

SIAT — B.S. in Systems thesis

2026 – Present

midusi, Universidad Nacional de La Plata

Computer-vision system for vehicle traffic analysis. The thesis is being built now.

- System stack: FastAPI, SvelteKit, PostgreSQL, MinIO, and a worker that runs YOLO inference. Five services on Docker.
- In this stretch I took production deploy, video object storage, and the inference pipeline, including H.264 encoding.

PERSONAL PROJECTS

- **La Justa.** Clothing shop in Next.js: collections, made-to-measure pieces, size guide, and Mercado Pago checkout.
- **Tura.** Reading app with Expo and self-hosted Supabase.
- **Paper trading bot.** Scans live Binance data, ranks markets, trades with a mandatory stop, and runs a genetic learner. It cannot place a real order.
- **Credit-bot dashboard.** Multi-tenant Next.js and MongoDB panel for customer conversations.
- **Buenos Aires Crea.** App with a Next.js frontend and a FastAPI and SQLAlchemy API.
- **Puente.** Flutter app for people with visual and hearing disabilities: large text, speech, and vibration. Family members enter the data. It does not move money.

EDUCATION

University Programmer Analyst — Universidad Nacional de La Plata, School of Computer Science. Degree completed.

B.S. in Systems — Universidad Nacional de La Plata, School of Computer Science. November 2020 – Present. Thesis in progress. About to graduate.
